

ToolWatch Enterprise Essentials

Learn necessary skills to be successful

Course Details

This course is designed for ToolWatch users who want to gain fundamental knowledge of the key components and skills needed to use the ToolWatch system. Participants engage in an interactive, hands-on training experience that will enable them to effectively implement and use the system. They'll learn how easy it is to create tool records, locate and transfer tools and equipment, and use ToolWatch's powerful reporting functions. The application and use of ToolWatch's mobile scanning devices will be covered in depth.

Upon completion of each course, a brief examination is administered and participants are awarded certification for the skills they have mastered.

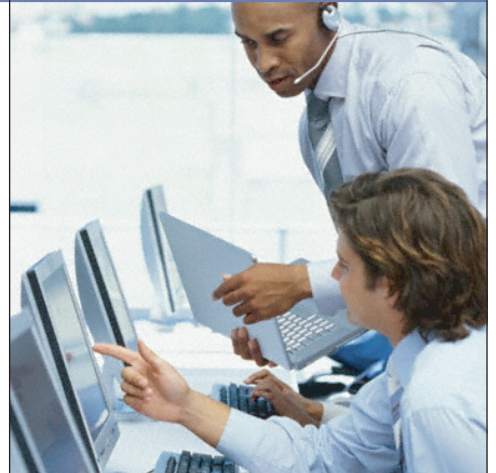

Prerequisites

All ToolWatch classes assume that participants have a reasonable understanding of Microsoft® Windows. Additionally, before attending ToolWatch training you should:

- know basic mouse skills such as double-clicking and right-clicking;
- be able to display the contents of a "drop-down" box by pointing and clicking with the mouse;
- know how to scroll through the contents of an open window by using the up/down and left/right scroll arrows; and
- have a basic understanding of how your company plans to use the ToolWatch Enterprise system.

This Class Covers

- System overview and navigation
- Creating tool records
- Searching for tool records with the ToolWatch tool browser
- Assigning and transferring tools to employees and locations
- Express check-in
- Printing ToolWatch reports
- Tips on labeling your tools
