

# TOOLWATCH<sup>®</sup> Enterprise

We are Operations Management

Getting the right tools on time, on site and in working order is mission-critical. It takes solid internal operations to enable exceptional productivity in the field. ToolWatch Enterprise streamlines your business processes and connects your back office, warehouse and field teams by introducing technology that provides them with exceptional accuracy, from throughput to flawless execution.

## **Tool and equipment management**

Manage tools and equipment more efficiently across warehouses, tool cribs, and job sites. The result is improved tracking, increased accountability, lower tool and equipment costs, higher productivity, and improved operational and strategic decision making.

## **Materials and consumables management**

Manage materials and small items like discs and blades quickly and efficiently. You'll know exactly how much you have and where it is located. ToolWatch allows you to keep just the right amount on hand and to move assets fluidly from one site to another.

## **Purchasing and receiving**

Perform purchasing and receiving tasks from anywhere: warehouse, tool crib or job-site. Reorder notifications ensure that you never run out of an item. Automated purchase-order creation saves time and increases accuracy.

## **Service and calibration**

Ensure that tool, equipment and fleet repairs and calibrations are always performed on-time. Automatically track repair costs. Access complete service history for all your assets, and identify which brands and models are the most reliable and worth purchasing again.

## **Job costing and billing**

Produce accurate job cost totals and invoices quickly and efficiently with comprehensive tool, equipment, and material billing functions. ToolWatch automatically charges customers, department, or projects for items used, lost, or damaged, freeing field and warehouse teams from tedious administrative tasks. Real time data gives managers the information they need to accurately assess performance and increase project profitability.

**Multiple Stocking Locations** allows you to manage construction resources at multiple locations, helping you improve asset visibility across the organization.

**Multiple Reporting Points** enables data roll-up from multiple stocking locations, yielding a view of tool data from organization-specific regions or departments.

**User-Defined Kits** allow groups of tools to be assigned together, enabling quick identification and replenishment of items missing from a kit.

**Field Requisitions** Submit requisitions anywhere, anytime. Draft capability while compiling a list allows for one-touch request of equipment, tools and materials, auto-generating a warehouse Pick Ticket. Requisition status right from your device.

**Pick Tickets** Easily and accurately request items, simplifying communication between job-sites and the warehouse.

**User-defined Templates** Save lists of items to enable consistent creation of kits, pick tickets, and purchase orders.

**Mobile** keeps field teams connected to ToolWatch wherever they go, yielding accurate, real-time tool, equipment and materials information.

**Administrator-Controlled and Enterprise-Class Security** allows secure and user-specific access levels based on employee roles, enabling you to implement the level of control that meets your needs.

**Automatic Low-Level Notifications** ToolWatch automatically displays a message in the message center when inventory levels are too low or too high, as these conditions can affect performance and profitability. Get a detailed list of all actionable items with one click.

**Flexible Billing Options** Choose billing mark-ups for products or specific projects. Set up cost codes for different categories (e.g. Electrical, Plumbing, General Conditions). View current billing charges at any time.
